Short Description	
Installation of Smart composting systems	

12 - Acea Smart Comp

Among the initiatives that promote a circular economy, Acea has developed and trademarked an intelligent system equipped with IoT technology and movement sensors for zero kilometer composting. Research and development activities led Acea Elabori to the creation of a Smart Comp Unit prototype, which will form the basis of the new version Acea Smart Comp 2.0. The SmartComp composter is a small-scale plant which, through a completely automated process, takes 90 days to transform organic waste into quality-certified compost, sanitised and without pathogenic bacteria, ready to be used as fertilizer and soil conditioner. The local treatment of organic waste is thought for those who produce huge quantities of waste: markets, malls, airports, stations, canteens, etc. Acea SmartComp allows waste to be treated on site and thus avoids its transportation, reducing its cost and the relative emissions. The advanced integrated IoT technology automates the whole process, monitoring in real-time the state of transformation and various environmental data (temperature, humidity, interstitial gas, emissions, etc). Data gathered and analysed is given back to the client through a dedicated dashboard which shows the performance of the different indicators, such as removed CO₂ emissions and the quantity of produced compost. Acea Innovation has begun the commercialisation of the SmartComp.

PROJECT STATUS: ongoing

LOCATION: Latium, Italy

GREEN BOND ALLOCATION

ALLOCATION		
Total financed amount (€ million)	2019	2020
