

PRESS RELEASE

FERENTINO, ACEA ATO 5 WORK TO REPLACE THE WATER MAINS AND REPAIR THE SEWAGE SYSTEM IN VIA CONSOLARE IS UNDERWAY

Frosinone, 19 August 2020 – Acea Ato 5 has started **installing new water mains and repairing the sewage system** along Via Consolare in Ferentino, in the heart of the historic town center.

Over the past few weeks, the Municipality of Ferentino and the Provider have worked side by side on the project in order to provide a **definite and effective solution** to that part of the street, which had been under repairs in the past.

As mentioned, the project includes installing new water mains and repairing the sewage system. At the request of the Municipality of Ferentino, Acea Ato 5 has also committed to installing a **rainwater conductor** on the Municipality's behalf, in order to provide the street with a complete water management system and improve rainwater collection.

After completing the project, Acea Ato 5 will repave Via Consolare using the same "sampietrini" cobblestones provided by the Municipality.
